

The MAT-Tower-Cam FX is the overhead (camera underneath) version of the standard Tower Cam. It can let the camera dive into the set with a stroke of about 3 meters from a fixed rigging.

Compared to a cable system, which supports only lightweight camera's, the Tower-Cam FX is able to support heavy cameras and lenses. The Tower-Cam FX moves gently and precisely and is almost completely silent. The system: column + remote head can be operated by 1 person.
