

The Flyline is a cablecam system. And this by using two ropes, 1 to ride on and 1 as the safety. The Flyline does not require heavy winches. The Flyline makes use of a DC motor on the trolley along the cable. The power is provided by on-board lithium-polymer batteries. It is possible to reach speeds up to 45 mph (65kph). The maximum rope length is 470m at the moment.

For Flyline we also have a stabilized head, the Shotover U1g. So you can still, at high speeds, make the most out of the zoom.

specs

Max speed	65 kph
Bridgeable length	470 m
Output voltage	24V or 48V
Max Payload	25 kg
Frequency	2.4 Ghz
