

The dactylcam pro is designed and engineered for broadcast, live event and feature films needing higher capacity payloads, redundant safety features and the power to perform in harsh environments.

The DactylCam Pro is built on an intuitive digital platform allowing users to set digital stops on the line and program acceleration, deceleration and top speed wirelessly through the Pulse controller which displays distance to the end, MPH speed, battery voltage and overall health of the system.

A Safety pulley assembly connects directly above the sled for additional safety during operation.

Engineered with Digital Safety Stops, Secondary Safety line, and ACTIVE Traction Control.

### specs

Max speed	78 kph
Bridgeable length	470 m
Output voltage	24V or 48V
Max Payload	45 kg
