

The Sam-Dolly is our self-developed travel-cam. It is suitable for all common travel-shots, even completely wireless (403-473MHz & 869MHz) if desired (for example on a fully enclosed circular track).

De Sam-Dolly can operated on fixed heights with the lowest lens height of 78 cm or with a hydraulic column with min lens height of 110cm and max lens height 170cm.

The speed, acceleration, deceleration, sensitivity and smoothness can be adjusted to suit.

The tracks can be custom made or bent in the right curve to precisely fit around your set.

## specs

Length	103 cm
