

Lambda is a Nodal Swing Head ideally suited for 35mm cameras equipped with long lenses, matte box...

By providing a high level of operational flexibility, this Fluid Head can be mounted easily on a wide range of carriers, including tripods, dollies, cranes and camera-cars. The assembly can be reversed in underslung position for low shots to the ground.

The balance is designed so that the camera can rotate in the center and 360 ° rotation around its vertical axis. No springs or similar elements ensure that the head in a particular tilt remains state. the fluid pan and tilt movements have exactly the same feeling.

The Lambda uses the patented Cartoni fluid drag control on both pan and tilt modes.

specs

Totaal gewicht	21 kg
Gewicht 3rd axis	15,5 kg
Max camera gewicht	40 kg
Connectie	Mitchell / 150 mm
Pan limiet	360 °
Tilt limiet	360 °
Rol limiet	360 °
